

Elsa Spiders and spider kits.

The main application field of our spiders is the integration into cardan joints. The spider is the main component of the cardan joint. Spiders, however, are also used in numerous other applications. Our product range includes e.g. also so-called „compensation spiders“ for differential gears and spiders for tool technology.

Our spiders are made of high-quality pressed or forged blanks. Processing such as turning, case-hardening and grinding is carried out at our production facilities and strict quality control processes are adhered to.

Complete spider kits with needle or roller bearing supported bushings are part of the delivery program of our cardan shaft service.

Spiders

For torque range: 6 Nm to 35000 Nm
